

LQT60 WIDE

CONFIGURABLE MULTI TRANSDUCER FOR ALL ELECTRICAL NETWORKS

LQT60 Wide is a configurable multi transducer for all electrical networks. Any 5 measurable electrical quantities can be linked to the 5 analog outputs. It has 2 pulse outputs for measuring active and reactive energy. All electrical quantities can be obtained through its RS485 communication port.

The configuration is simple using "ConfigLQT" software through the USB port. The software is available and free to download on our web page.
