Universal Test Plug UTP-10

The 10-pole Universal Test Plug is used to isolate external connections from equipment under test. The UTP-10, Universal Test Plug, by MPS has been mechanically designed and engineered with the actual end user or Field Technician in mind and contains the following features:

- 1.) **Extended Comfort Handle** - Provides for a nice grip which makes it easier for technicians while inserting or exerting the test plug to and from the test switch.
- 2.) **Extended Length** - Added for safety to avoid opening or closing blades by accident while removing the test plug from the test switch while plates are stacked on top of each other.
- 3.) **Test Plug Connector** - Accommodates various lugs and plugs such as, spade lugs, ring lugs, standard banana type plugs, and standard safety plugs.

The Universal Test Plug - UTP-10 can be used on all test switches on the current market, such as MPS' Universal Test Switch, States' FMS Test Switch or the ABB FT-1.
